This task involves building a feature-rich To-Do List web application with enhanced functionality for task management, deadline tracking, and prioritization. The goal is to create a full-stack application.

Task Management:

- Users should be able to:
    - Add tasks with a description, priority level, and deadline.
    - View tasks in a list format, sorted by priority or deadline.
    - Edit existing tasks (update description, deadline, or priority).
    - Delete tasks.

Deadline Countdown:

- Display time remaining for each task:
    - More than 1 day remaining: Show the countdown in years, months, and days.
    - Less than 1 day remaining:
        - Highlight the task with a red background or border.
        - Display a live, updating countdown in hours, minutes, and seconds.

Priority Levels:

- Allow users to assign a priority level to each task (e.g., Low, Medium, High).
- Display tasks with a coloured label or icon to indicate priority:
    - Green for Low.
    - Yellow for Medium.
    - Red for High.

Task Completion:

- Add a feature to mark tasks as completed.
- Completed tasks:
    - Are moved to a separate section (e.g., "Completed Tasks").
    - Show their deadline as "Completed on [date/time]".
